Quick Reference Guide

The SonderCare bed was designed with simplicity in mind. Large oversized buttons allow for easy interaction and control of the bed. A clever hand control holder can be easily positioned on either side of the bed. Functional position buttons allow for easy adjustability to common comfort positioning.

Lockout Feature

The supplied magnetic chip must be placed in the area marked in red to activate the locking function. At the same time, the respective lock button (see table for symbols for secondary assignment) must be activated. A red LED in the centre of the row of buttons acknowledges that the function lock has been activated.

| S2		Locked - NO Functions
S10	🔒	Locked - Trendelenburg
S12	🔒	Locked - Sleep Position

Quick Reference Guide

The SonderCare bed rail was designed for residents. An all aluminum designed vertical side rail system offers premium quality assistance while allowing for efficient hygenic disinfecting of high touch surfaces. A simple latch mechanism permits the lowering of the rail. Dual stage design promotes increased safety for residents allowing for ergonomic entering and exiting of the bed. 40% coverage (Head Rail) does not require re-positioning to exit bed from a lying position.

Stage 1
Rail is 'free floating' in the Stage 1 position
Simply lift rail to raise to Stage 2

Stage 2
Rail is locked partially while in the Stage 2 position
Simply push Stage 2 lock buttons outward to lower rail back to Stage 1

Stage 3
Rail is locked while in the Stage 3 position
Simply push Stage 3 lock buttons inward to lower to Stage 2
